INTERNSHIP PRESENTATION

Java Programming Internship

Student Name: Aryan Kumar

Roll No.: 25SCS1003004866

Program: B.Tech Computer Science & Engineering

Batch: 2025–29

Organization: Skill Nexis

Internship Duration: 30 June 2026 – 30 July 2026

Internship Overview

- Completed a one-month online internship in Java Programming at Skill Nexis.
- Internship period: 30 June 2026 to 30 July 2026.
- The internship followed a practical, project-based learning approach.
- Work was completed through weekly assignments and projects.

Objectives

- Learn and strengthen Java programming fundamentals.
- Understand object-oriented programming concepts.
- Work with collections and file handling.
- Implement input validation and exception handling.
- Develop a complete Java-based capstone project.

Week-wise Work

- Week 1: Java fundamentals, Calculator, Grade Evaluation and Bank Management.
- Week 2: Object-oriented programming, Student, Vehicle Inheritance and Library Management.
- Week 3: Collections and File I/O, Student Marks, Word Frequency and Employee Management.
- Week 4: ATM Simulation capstone project.

Technologies and Tools

- Java programming language.
- Object-Oriented Programming concepts.
- ArrayList collections.
- Java File I/O for text-based data storage.
- MessageDigest / SHA-256 for PIN hashing in the ATM project.
- Visual Studio Code and GitHub.

Major Project – ATM Simulation

- Console-based ATM application developed as the Week 4 capstone.
- PIN-based account authentication with limited login attempts.
- Balance enquiry, deposit, withdrawal and transfer operations.
- Transaction history and account details.
- Input validation and error handling.
- Persistent account and transaction data using text files.

Learning Outcomes

- Improved Java programming and problem-solving skills.
- Practical understanding of object-oriented programming.
- Experience with collections and file handling.
- Better understanding of validation and exception handling.
- Experience in developing and maintaining projects using GitHub.
- Ability to combine multiple Java concepts into one working application.

Conclusion

- The internship provided practical exposure to Java programming.
- The four-week progression helped connect programming theory with implementation.
- The ATM Simulation served as an integrated application of the concepts learned.
- The internship improved confidence in developing console-based Java applications.

THANK YOU

Aryan Kumar
